

Software Requirements Specification

- [General](#)
- [Entries](#)
 - [Object Writing](#)
 - [Metaphors](#)
- [Settings](#)

General

- each day a new object (globally the same for every user)
- user can have automatic rotation of exercises, subtypes, etc.
- user can add subtitle/translation/comment for current object
- user can look at past entries (via a calendar)
- user can search past entries via object names
- user can also manually change exercise type per day (object writing or metaphors)
- user can manually change “rotating” or “free” on daily exercise

Entries

Create:

- user selects to start daily exercise.

Read:

- user selects entry by date (calendar)
- user selects entry by object name (search bar)

Update (daily exercise):

- user can immediately edit after starting daily exercise

Update (archive):

- user on the entry page
- user starts edit mode first
- user can now edit
- user needs to save changes

Delete:

- user clicks delete button on entry (needs to confirm)

Object Writing

- WYSIWYG editor for text (e.g. [Summernote - Super Simple WYSIWYG editor](#))
- user can set timer

Rotation enabled:

- all 7 senses automatically rotate (if rotation is enabled)
- one textarea per sense

- question mark icon behind sense: hover explains metaphor type + example

Rotation disabled:

- one textarea for the whole entry

Metaphors

- user can set timer

Rotation enabled:

- metaphor type is shown at the top (expressed identity, qualifying metaphor, verbal metaphor)
 - question mark icon: hover explains metaphor type + example
- all 3 types of metaphors (+ subtypes, e.g. "x is y", "the y of x", etc.) automatically rotate
- sections:
 - characteristics (adding selectable texts, e.g. pill badges)
 - chosen characteristic (selected through pill badges) + array of nouns/adjectives/adverbs (also selectable, e.g. pill badges)
 - the resulting metaphor is automatically assembled

Rotation disabled:

- one textarea for the whole entry

Settings

- user can choose exercise rotation:
 - only object writing
 - only metaphors
 - one day object writing, next day metaphor, etc.
- user can activate/deactivate timer for exercises + set default time
- object writing: free (only one text input, no rotation of senses), rotating (rotation of senses, one text input per sense)
- metaphor: free (no rotation of types & subtypes), rotating (rotation of types & subtypes)
- UI theme (light & dark), app language (en, de)
